The values for the graph were determined by CT and compared to the untreated sample and were normalized to 18S.
"CT is an excellent diagnostic tool of tremendous clinical value in many situations," Dr.
"Many are lulled into a false sense of security when it comes to OTC drugs, but the side effects and risks are just as severe as those for prescription medications," he says.

Furthermore, the findings in SATURN have implications for the development of novel anti-atherosclerotic therapies.
